

Please replace paragraph [0030] with the following:

a2 --FIG. 11 is a plan view illustrating an exemplary second printed circuit board according to the present invention;--

Please replace paragraph [0037] with the following:

a3 -- The upper substrate (not shown) of the liquid crystal panel 210 has a color filter, a black matrix, and a common electrode. The color filter colors light radiating from the back light unit 240 into the liquid crystal layer of the liquid crystal panel 210. The black matrix blocks needless portions of the light. The lower substrate (not shown) of the liquid crystal panel 210 has a switching element and a pixel electrode. A thin film transistor (TFT) is preferably used as the switching electrode. Together with the common electrode of the upper substrate, the pixel electrode applies an electric field to the liquid crystal layer. The liquid crystal panel 210 further has an upper polarizer (not shown) and a lower polarizer (not shown) respectively formed on the upper substrate and the lower substrate.--

**IN THE CLAIMS:**

Please replace claims 1, 15 and 16 with the following:

a4 1.(Amended) A liquid crystal display module, comprising:

a liquid crystal panel including an upper substrate, a lower substrate, and a liquid crystal layer interposed between the upper and lower substrates;
